Products List

This page should show two tabs, one is product another is combo.

Than it should be able to select the category than sub category (if any)

In this Main page, it will show Product/combo name and Product/combo title, also a smaller version of the actual image submitted，   retail price, product/combo value, commission, member price.
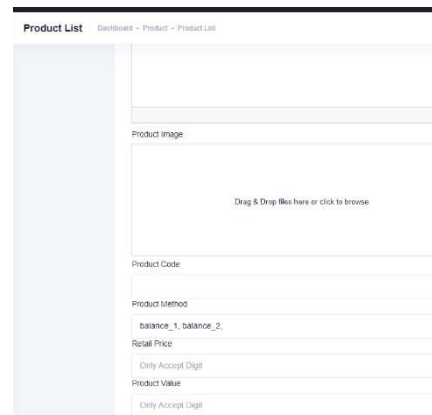

Action will have View or Add. If click view, it will popup Ajax screen to show all the details except for is low status, product method and product stock.

When click on Add, it will go to shopping cart screen where it can check the details of all order and do a final checkout.

On the final checkout screen it will ask to use e-wallet or do you have a product PIN that you would like to use.

e-wallet got 6 balance, balance_1, balance_2 and so on. Example for this product in product method we put in balance_1, balance_2,

This means only can use balance_1 or balance_2 amount to pay

Admin can create pins under admin/pin-list. At checkout screen, if the member have a pin number, he/she can key in the pin number, if it matches the pin number, than we will treat this payment is paid by pin number.

Upon successful payment/added, if transaction is paid using ewallet, than we must also add transactions under e-wallet history. If is paid by pin, we need to update the pin number details.

We also need an additional menu call My Purchased under product list. This will display what the member has purchase.
